

ABSTRACT

The present invention relates to an improved case for a computer, which is small in volume, convenient in carrying, easy in assembly, simply in wiring, low in cost, convenient for plugging in from the front,
5 and good in heat transmission.

Its peculiar structure includes a front panel, a rear panel, support frames, a case, and a handle, wherein, an ventilation opening formed on Aluminium supporting frames; a front panel and a rear panel each secured by a locking plate to supporting frames; a circuit board formed
10 on supporting frames without a bottom plate; an anti-dust cover, with sockets connecting with the circuit board, formed in a front; and a retractable handle, being fixed on a fastener, formed on a groove atop a case. Thereby, the present invention is both advanced and pragmatic in enhancing operation.
